Attention to Detail Sample Test Questions

This portion of the Engineering Aide Test measures how fast you can identify differences between two figures. The figures may be designs or they may be sets of numbers and symbols. For each question, you will compare the two figures and decide if the figures are exactly the same.

**Example Questions: Are the two figures the same?**

1. € €

2. 3/4″/mi. 3/4″/mi

3. » «

**Attention to Detail Sample Questions Answers and Explanations**

1. The correct answer is "yes" because the two figures are the same.

2. The correct answer is "no" because the numbers/symbols are different. Notice that the one on the left has a period after mi, while the one on the right does not.

3. The correct answer is no because the symbol in the first figure points to the right and the symbol in the second figure points to the left.
